Office Action Summary

Art Unit: 1772

This application contains claims directed to the following patentably distinct species of the claimed invention: There are three species to alter the volume of the container (relative to a conventional container) and thus the head space. They are:

Species I, wherein the container includes a raised end including a raised upper flat portion as represented, for example, by Fig. 3.

Species II, wherein the container includes a concavity that is reduced and depressed as represented, for example, by Fig. 9

Species III, wherein the various diameters of the container and its elements have a certain relationship so that the container has an increased volume due to an increased diameter..

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1772

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

In addition, claims 23-29 are presented which are only directed to a container and a splashguard which can comprise an internal bead. Whereas Species I and II are disclosed as having internal beads, it is not recited that the beads function as splashguards. A bead can be a rigidifying element. A bead does not have to extend completely around a container. It is also not clear, whether it is the size, shape or extent of a bead that imparts a splash guard function. Therefore, claims 23-29 are considered to be a separate invention from the species described. Thus, applicants are requested to elect one of the three species and list the claims readable thereon or the separate invention recited in claims 23-29.

To expedite prosecution, note that the specification appears to have inconsistent numbering relative to the figures. See especially the third embodiment, although applicant is encouraged to review the entire specification.
